

Innovative solutions for agriculture and industry

## ANGLEBASE COMPANY – TECHNOLOGICAL REVIEW

The company Anglebase commercializes revolutionary green technology in the field of irrigation and soilless culture.

The development of the systems has built up over 12 years of production of vegetables for "Hazera" company and in the previous experience in the farm "Ramat Hanegev".

Growth in unique containers – for flowers and vegetables, inside greenhouses or in the open field.

An innovative funnel leads the irrigation directly to the roots.

The technology implements the use in the control and weight of the irrigation and fertilization of the field in the accurate timing according to the plant needs.

The placing of the growing system is possible without processing the soil.

The technology: friendly to the environment without necessity of cycle of water.

Use of less than 50% of irrigation and fertilization.

Obtaining a homogenous production, with high yield of excellent quality.

Growth of fruits and vegetables under any conditions: in greenhouses, Tunnels, Net Houses, open field, marginal areas, slopes, and in lands not compatible to agriculture, Salty water and areas of lack of water.

In the field of perennial crops the company commercializes:

Feeding funnel, leads the dripping directly to the roots, avoids evaporation and germination of herbs, and leads the water and fertilizers straight to the area of consumption.

The method enables fertilization and the introduction of organic materials and others directly to the roots, also not through the water system.

The funnel is compatible for all types of organic crops and applicable in all kind of lands, feeding canals and feeding pillows: in plantations, orchards, shrubs, vineyards and cultivations of vegetables.
